

ADHESIVES INFORMATION & OPTIONS

Since it's important to keep your Eversense Smart Transmitter firmly in place over the sensor, here are some tips — followed by a list of products you may find helpful.

General Tips

- Only apply to clean, dry skin. Remove any lotion or soap prior to placing adhesive patch and smart transmitter.
- Your kit comes with 300 white and 90 clear adhesives.
- We encourage you to try both types. The **white adhesive** is perforated and may be better at wicking away moisture. The **clear adhesive** is best for discretion. Both are gentle on the skin and use a medical-grade, non-reactive silicone adhesive. They do not contain any natural rubber latex.
- If you experience persistent skin irritation, consult your healthcare provider for their recommendations.

OTHER AVAILABLE PRODUCTS AND OPTIONS: Below is an overview of adhesive tips from a clinical article* authored by clinicians independent of Ascensia and Senseonics. Please note that the adhesive products mentioned below are not manufactured or tested by Ascensia and Senseonics, and we cannot endorse their use.
